KNOWLEDGE SAVES LIVES
NEARLY 85% OF CAR SEATS AND BOOSTER SEATS ARE MISUSED,
RESULTING IN REDUCED EFFECTIVENESS

Car crashes are the leading cause of death for children 1 to 13. While you may already know the safest place for your youngest passengers is in the back seat—in a car seat, booster seat or seat belt—correctly choosing the right restraint may not be as simple as you think.

DID YOU KNOW?

- Every year, on average, more than a third of all kids under 13 killed in car crashes are not properly buckled up or in a car seat.
- Using car seats reduces the chance of infant and toddler fatalities by 71% and 54% respectively.
- Every year, on average, more than 100,000 children under the age of 13 are injured in traffic crashes involving cars, SUVs, vans, and pickups.

IS YOUR CHILD IN THE RIGHT CAR SEAT?

The Sammamish Police Department has two certified Child Passenger Safety Technicians who can help you get your child properly restrained in the correct seat, and make sure that seat is properly installed in the vehicle. Contact Officer Sawtelle below to schedule an appointment.
